Application: Travel ICU Nurse (Locum) at Dedicare

Dear Hiring Manager,

Dedicare's position as the Nordic region's largest healthcare staffing provider – actively expanding into Germany, the Netherlands, and France while holding major public tender contracts across Norway and Sweden – is precisely the kind of infrastructure that makes seven years of cardiac ICU experience, including ECMO/ECLS and heart transplant post-operative care at LMU Großhadern and DHZC, deployable at scale rather than confined to a single institution. As an EU citizen holding full German nursing credentials recognised under EU Directive 2005/36/EC, I am targeting a strategic relocation to the Nordic healthcare sector within the next four to six months, supported by an immediate commitment to intensive Nordic language training.

Rapid integration across diverse clinical protocols and electronic documentation systems defines successful locum deployments. Agency deployment with KCS Medical and Komorebi Staffing across multiple Berlin ICUs significantly expanded clinical scope beyond the cardiac-focused Deutsches Herzzentrum der Charité (DHZC) environment. Gaining experience with TAVI and Mitraclip post-procedural care, plasmapheresis, and acute dialysis ensured safe patient management across structural cardiology and general intensive care units, proving the capacity to maintain high clinical standards in unfamiliar hospital environments.

Managing critically ill patients in high-acuity intensive care settings requires a foundation built in elite university centres. Five years at dedicated cardiac and ARDS ICUs at LMU Klinikum Großhadern and DHZC established a clinical foundation across mechanical ventilation, complex sepsis, and organ transplant post-operative care. Clinical exposure to ECMO/ECLS patients in respiratory failure settings, alongside IABP and Impella management, provided the multidisciplinary team with critical patient monitoring support during complex weaning discussions and haemodynamic stabilisation.

A conversation with Dedicare's Nordic recruitment team would let me demonstrate how this cardiac ICU background and proven agency adaptability could fulfil critical public healthcare tenders across Norway and Sweden.

Kind regards,

Tanja Zierer
